Quality, Service and Price

Coniferous Evergreens

The greatest advantage of using Evergreens in beautifying the home grounds is that Evergreens retain their foliage the year around. By planting the proper varieties in their proper places wonderful results can be obtained with but little expense. It is necessary, however, to plant Evergreens where they will get ample sunlight that they may show their true colors. If you are not the planting of Evergreens and wish to plant at this time it will be a pleasure for us to with such information you may wish to help you get the desired results.

BOXWOOD AT ENTRANCE TO OUR MAIN NURSERY

OLD VIRGINIA BOXWOOD

and its Planting and Care

Moving Boxwood—Boxwood is dug with a ball of earth, burlapped and wired, so that soil will not crumble and give way in handling; is wired to oak platforms to enable easier handling and to protect the ball in transit.

When to Plant Boxwood—Boxwood can be planted at any time so long as there is no new, tender growth on the plants, we prefer early spring or early fall planting.

How to Plant Boxwood—In planting boxwood the hole should be dug one foot wider than the ball of earth, place ball in hole and remove wire and burlap, fill hole half full of top soil and turn hose on until hole is half full of water, see that the wet muck is worked under and around the ball to close all air pockets, then fill hole with top soil to within three inches of the top of ball, then apply German peat moss three inches and on top of that apply bone meal, finely ground, covering peat moss to a depth of two inches, then water down, leave ground cupped around plant in saucer shape to hold water when applied. Boxwood requires some lime and we find by using bone meal the plant gets about the required amount of lime.

Watering Boxwood—Don't let your boxwood get dry—water once a week if not having weekly rains, we find it a good plan to sprinkle foliage once or twice a week in hot, dry weather. Turn hose on full force as this has a tendency to knock off red spider.

Diseases and Treatment of Boxwood—Canker—This is sometimes known as Nectria Canker, this can be largely controlled by the use of Bordeaux Spray, full strength, applied any nice day during winter, or you can use Wilson's Fung-O. This canker causes yellow to brown spots on the foliage and spreads down the stems to the trunk of the plant.

Box Leaf Minor—We have had no experience with this pest and advise you to write Virginia Department of Agriculture and Immigration, Richmond, Virginia, for bulletin.

Red Spider—This pest is right troublesome during hot, dry weather, the best remedy we have so far found is sulphur, we get three-hundred-screen dusting sulphur and apply with a dust gun, go all over the plants thoroughly and after dusting go over the plants with a broom and knock off all that has settled in spots, for this will cause a yellow spot to appear from burning. We use a winter spray of miscible oil on boxwood, use one part oil to thirty parts of water, Sunoco Oil we find very good. This winter spray will, many times, keep spider off during spring and summer and if it fails we apply sulphur as suggested above.

These notes are made from our past fifteen years experience in handling boxwood, propagating annually several hundred thousand plants and collecting from old Southern homes in Virginia and North Carolina many carloads of boxwood.

We have shipped thousands of collected plants of boxwood in the past fifteen years and to this date have not had one plant reported dead, there may have been some loss that was not reported, but the loss must have been negligible or we would have had complaints.

If you should desire any additional information as to diseases of boxwood, you might write the following addresses for bulletins:

United States Department of Agriculture, Bureau of Plant Industry, Chief of Bureau of Entomology, Washington, D. C., or the Virginia Department of Agriculture and Immigration, Richmond, Virginia.

We have many fine specimens, in sizes from three to ten feet. Some unusual shapes. Some very old living antiques. The following will give you some idea of our prices for perfect specimens, dark, rich green color, mountain grown, dug with heavy ball of clay, securely wired to platforms for shipping:

Buxus Suffruticosa (Old English Box)
